

# Over 400,000 seats sold Useful Multiplier

Only \$59\*  
for Schools and Universities

## Turn 1 PC into 10 and SAVE—with Useful Multiplier!

Over 400,000 seats sold in 100 countries. Useful Multiplier is the #1 Linux-based desktop virtualization solution.

**Useful Multiplier** delivers the quickest, easiest and least expensive way to deploy new desktops (or thin clients) in computer labs, classrooms, media centers, libraries, call centers and Internet cafés. By eliminating up to 9 out of every 10 physical PCs, organizations can dramatically reduce their desktop hardware, management, maintenance, infrastructure and electricity costs.

**User stations** consist of only a monitor, USB keyboard and mouse—connected directly to the host PC. Standard dual-head video cards provide the additional ports for the monitors; powered USB hubs can be used for extra USB ports (if needed). The end result—full-featured, thick-client stations running on a single PC. Useful Multiplier supports USB memory keys and USB audio headsets. Supports Novell Client for Linux.

### Featured Highlights:

- **1 PC, 10 Stations:** Low-cost, eco-friendly alternative to stand-alone Windows desktops and thin clients.
- **Stretch Your Budget:** Save 60-80% on desktop hardware, management, maintenance and network infrastructure costs.
- **Perfect for:** Useful Multiplier is ideal for computer labs, media centers, libraries, Internet cafés, call centers and hotel lobbies.
- **Built for Linux:** Useful Multiplier is compatible with SUSE Linux Enterprise Desktop, openSUSE, Ubuntu, Fedora, Redhat, Mandriva, Linspire, Xandros and other Linux distributions.
