Omni Solutions

Since 1999, Omni has helped Novell customers increase the return on their **GroupWise, NetMail, eDirectory and SUSE Linux** investments. Customers trust and rely on Omni for their **mobility, management, messaging and Linux desktop solutions**.

Leading Novell Application Developer

Omni has been a leading Novell application developer since 1999. Our portfolio of management, security, mobility, messaging and Linux software delivers **real and tangible business benefits** for enterprise network users of Novell GroupWise, SUSE Linux and mixed Novell and Microsoft networks.

GroupWise Mobility

Omni Mobile delivers a full on-line and off-line GroupWise client for Palm, Pocket PC, Sony Ericsson and Nokia Series 60 PDAs and PDA Smartphones—NO Windows servers required! Get mobile access to your full GroupWise account: email, calendars, multiple address books, multiple folders, attachments and much more. Runs on your existing GroupWise 6.x and 7.x system on any platform (NetWare, Linux or Windows).

Omni Messenger is the only native mobile GroupWise Messenger product available for Pocket PC and Windows Mobile devices. With Omni Messenger, you can collaborate in real-time from anywhere, at any time, on any Pocket PC.

User Account Management

eControl provides a web-based, "ZERO-Rights" user account management tool for mixed eDirectory, GroupWise, Active Directory and Exchange systems. Use eControl to delegate a restricted set of user management tasks to junior administrators and help desk operators. NO trustee assignments or access required to Microsoft Management Console, ConsoleOne, NWAdmin or iManager. An Ideal complement to IDM 3.

EMU, Omni's Enterprise Management Utility, enables organizations to bulk create, modify, manage, import or delete thousands of eDirectory, NetMail and GroupWise users in a single session. Popular with school districts and large corporate and government Novell customers.

Linux Desktop Multiplier

Linux Desktop Multiplier enables up to 10 users to work at the same time on a single Linux desktop computer. Get a "10-for-1" advantage on deploying low-cost, high-performance Linux desktops in computer labs, healthcare, retail and Internet cafés. Outperforms thin clients at a fraction of the cost. Supports Novell Client for Linux, touchscreens, individual user sound and USB memory keys.

Publish Web Calendars from GroupWise

CCUweb publishes on-line calendars based on GroupWise accounts. Calendar items, including appointments, tasks, notes and attachments, can be scheduled to auto-update on regular intervals. Users can import entries directly into their GroupWise account or Outlook client from the web site.

GroupWise "Pain Relief" Utilities

- Omni Notify
- NetMail Notify
- GWmerge
- GWemailer
- Common Calendar Utility (CCU)
- Internet Address Utility (IAU)
- Common Rules Utility (CRU)
- Common Proxy Utility (CPU)
- Address Book Utility (ABU)
